

Gork's GOODFILLA

Gork's GoodFilla WB Heavy Body Paste filler

- 1) The only **easy to sand**, non-shrinking water-based wood patch on the market.
- 2) Has excellent **adhesion** and does not shrink. This saves the installer money in time and labor. It only needs to be applied once, unlike emulsion based products which need to be re-applied after the big sander has vibrated it out.
- 3) **Flawlessly Accepts any finish**
- 4) **Stainable**. GoodFilla accepts stain. Every time. All emulsion based wood fillers don't.
- 5) **Tintable**. Can be mixed with any tint, stain, or dye. (Includes tannic acid which will react to current popular chemically reactive stains)
- 6) **Zero waste**. As any installer will tell you, they throw hardened wood filler out all the time. The lid almost always never gets replaced correctly. GoodFilla reconstitutes with water.
- 7) **Freeze-thaw stable**. Again, wood filler (and finish) is routinely rendered useless after being left on the truck in freezing temperatures. GoodFilla can be thawed and used unlimited times.
- 8) Coverage is 50%-75% more than other fillers. GoodFilla is extremely dense. It has an almost 2-1 specific gravity vs others with a 1.4-1.
- 9) **Multiple use**. Can be used as a grain filler, primer, and knot sealer.
- 10) **Zero VOC and non-toxic. It's a green product**
- 11) **11 colours: Red Oak, White Oak, Cherry, Maple/Beech/Pine, White, Neutral/Tint Base, Rosewood, Walnut, Mahogany/Brazilian Cherry, Ebony**

Gork's GoodFilla WB Trowel Ready wood and grain filler

- 1) First of its kind on the market. **The only easy to use** Trowel Ready water based wood filler available in the world! (in fact we discussed whether or not to patent it-but we believe the trade secret is more valuable and has more longevity)
- 2) **Has excellent adhesion and does not shrink**. This saves the installer money in time and labor. It only needs to be applied once.
- 3) **Flawlessly Accepts any finish**
- 4) **Stainable**. GoodFilla accepts stain. Every time. All emulsion based wood fillers don't.
- 5) **Tintable**. Can be mixed with any tint, stain, or dye.
- 6) **Zero waste**. As any installer will tell you, they throw hardened wood filler out all the time. The lid almost always never gets replaced correctly. GoodFilla reconstitutes with water.
- 7) **Freeze-thaw stable**. GoodFilla TR can be thawed and used unlimited times. It also maintains its consistency in a wide range of temperatures. From 1 deg C -100 deg C.
- 8) **Coverage is 25% more** than other trowelable fillers. One of the issues of trowelable fillers is that the water gets sucked out by the wood very quickly. GoodFilla's formulation allows a longer open time because it holds on to the water longer.
- 9) **Multiple use**. Can be used as a grain filler, primer, and knot sealer.
- 10) **Easy to sand!**
- 11) **Zero VOC and non-toxic. It's a green product**
- 12) **11 colours: Red Oak, White Oak, Cherry, Maple/Beech/Pine, White, Neutral/Tint Base, Rosewood, Walnut, Mahogany/Brazilian Cherry, Ebony**

Gork's GoodFilla WB "Filla-In-A-Bag" wood and grain filler

This innovative product appeals to woodworkers, makers, and artists since it seamlessly dovetails with all water-based products—*plus NC lacquer!* Our convenient packaging means you get exactly what you want every time. Mix the perfect amount for *your* project, to *your* ideal viscosity, with no waste. Other benefits include

- 1) Can be mixed with water and/or any WB pigment, dye, stain, clear finish, paint or glue.
- 2) Can be mixed with NC lacquer.
- 3) Accepts stain and finish just like wood.
- 4) Multiple applications: Patching, grain-filling, and even inlay.
- 5) Does not shrink, sink, crack, or fall out.
- 6) Unlimited shelf-life.
- 7) Environmentally friendly, non-toxic, zero VOCs, biodegradable.
- 8) Economical to ship
- 9) **11 colours: Red Oak, White Oak, Cherry, Maple/Beech/Pine, White, Neutral/Tint Base, Rosewood, Walnut, Mahogany/Brazilian Cherry, Ebony**

Gork's GoodFilla WB CLEAR wood grain-filler

Gork's GoodFilla Clear Grain-filler is the holy grail you've been looking for! You've never met another grain or pore-filler like it. Forget everything you learned about the arduous task of grain-filling, because this innovative water-based product saves you time, money, and headaches—helping you achieve a flawless finish every time! Benefits include:

- Does not impart any color or pigment to the finish—*it is completely clear!*
- Dries in 15 minutes
- Minimal sanding
- Can be applied between coats of finish
- Increases adhesion between finish and substrate
- Can be mixed with wood flour and GoodFilla paste to fill larger open-grain pores or voids
- Can be mixed with any WB/water soluble pigment, stain, paint or dye to enhance the grain
- Accepts any stain and finish just like wood
- Does not shrink
- Budget-friendly—a little goes a long way
- Environmentally friendly, non-toxic, zero VOCs

Gork's GoodFilla WB Gel Stain and Paint base

Gork's GoodFilla Stain and Paint Base gel will change the way you think about water-based stains and dyes forever by eliminating the frustration related to working with existing quick-drying products. Create custom stain or paint colors by adding any water-soluble pigment or dye. This innovative product offers you an unlimited open time, limiting lap marks and other imperfections often associated with water-based stains and dyes. **Gork's GoodFilla Stain and Paint Base** adheres to almost any surface and can be applied between coats of finish, reversible until a finish coat is applied. Benefits include:

- Dries in 15 minutes
- Can be applied between coats of finish
- Reversible—can be altered even when dried, before finish coat is applied
- Can be mixed with any WB pigment, stain, paint, or other color additives
- Budget-friendly—a little goes a long way
- Adheres to almost any surface
- Environmentally friendly, non-toxic, zero VOCs

All products are Made in the USA
